INDEX TO VOLUME XLV.*

A

Abbe, C., Mechanics of the Earth's Atmosphere, 442.
Absorption spectra, Julius, 254.
Academy of Sciences, National, Washington meeting, 527.
  Texas, Transactions, 78.
Agassiz, A., observations in the West Indies, 78, 358.
Age of the earth, King, 1; Fisher, 464.
Alternating Currents, Bedell and Crehore, 435.
American Philosophical Society, 527.
Astronomical Journal prizes, 168.
  Observatory, Yale University, Transactions, 357.
Astronomy, Practical, Miche and Harlow, 528.
Atkinson, E., 14th edition of Ganot's Physics, 436.
Australia, Barrier reef of, Saville-Kent, 362.

B

Baltimore, geol. map, Williams, 73.
Barker, G. F., chemical abstracts, 65, 155, 251, 346. 430, 520.
Barrett, S. T., Oriskany fauna, Columbia Co., N. Y., 72.
Barrett, W. F., Practical Physics, 524.
Barus, C., isothermals, isopiestics and isometrics relative to viscosity, 87; colors of cloudy condensation, 150.
Base apparatus, iced-bar, Woodward, 33.
Becker, G. F., "potential" a Bernoullian term, 97.
Bedell, F., Alternating Currents, 435.
Bergen, J. Y., Jr., Text-book of Physics, 255.
Berzelius and Liebig, Letters from 1831–1845, 433.
Blake, J. F., Annals of British Geology, 525.
Blowpipe Analysis, Endlich, 76.
Botanical Garden, Missouri, reports, 526.
Botany—
  Blanched seedlings, how they may be saved, Cornu, 356.
  Perfumes of flowers, localization of Mesnard, 355.
Botany—
  Vegetation, influence of moisture on, Gain, 356.
  See also under Geology.
Branner, J. C., geol. survey of Arkansas, 1891, 73.
Brazil, nepheline rocks in, Derby, 74.
British Geology, Annals, 1891, Blake, 525.
Brown, W., Practical Physics, 521.
Browning, P. E., determination of iodine in haloid salts by arsenic acid, 334; influence of free nitric acid and aqua regia on the precipitation of barium as sulphate, 399.

C

California Cretaceous, so-called Wallala beds as a division of, Fairbanks, 473.
Celestial Handbook, Poole, 528.
Chamberlin, T. C., diversity of the glacial period, 171.
Chemical Lecture Experiments, Newth, 68.
Chemie, Lehrbuch der allgemeinen, Ostwald, 522.
Chemistry—
  Acetylene, preparation of, Maquonne, 521.
  Acids, affinity-coefficients of, Lellmann and Schliemann, 348.
  Alcohol of the fatty series, new, Sundwik, 521.
  Ammonia, specific heat of liquid, Ludeking and Starr, 200.
  Barium sulphate in analysis, Phinney, 468.
    precipitation influenced by nitric acid and aqua regia, Browning, 399.
  Boiling-point apparatus for determining molecular masses, Sakurai, 346.
  Boron, the trisulphide and pentasulphide of, Moissan, 430.
  Cæsium-lead and potassium-lead halides, Wells, 121.
  Caffeine and theine, identity of, Dunstan and Shepheard 522.
  Carbon, the oxidation of different forms, Wiesner, 431.
    di-iodide, Moissan, 253.

* This Index contains the general heads Botany, Chemistry, Geology, Minerals, Obituary, Rocks, and under each the titles of Articles referring thereto are mentioned.

CHEMISTRY—
Charcoal, deportment of, with the halogens, nitrogen, sulphur, and oxygen. Mixter, 363.
Chemical phenomena at low temperatures, Pictet. 157, 432.
Crystals, influence of foreign substances on. Retgers, 65.
Electrolytic gas, temperature of ignition, Freyer and V. Meyer. 156.
Energy as a dimensional unit, Ostwald, 251.
loss of, due to chemical union, Gore, 520.
Fluosulphonic acid, Thorpe and Kirman, 252.
Freezing points of very dilute solutions, Raoult, 67.
Heat, re-conversion of, into chemical energy, Naumann, 155.
Hydrogen, reaction of, with chlorine and oxygen, Harker, 349.
Hydroxylamine, properties of free, de Bruyn, 430
Iodine in haloid salts determined by arsenic acid. Gooch and Browning, 334.
Ions, color of, Ostwald. 347.
electromotive activity of, Nernst and Pauli, 156.
Lactic acid resolved into optically active constituents, Purdie and Walker, 66.
Masrium, new element, Richmond and Off, 66.
Oxygen for lime light, Hepworth. 158.
Precipitated membranes, permeability, Tammann, 252.
Precipitates, separation of, at the surface-bounding electrolytes, Kümmell, 157.
Salt-solutions, rise of, in filter papers, Fischer and Schmidmer, 431.
Solutions, nature of certain, and new means of investigating them, Lea, 478.
Tellurium, double halides of, with potassium, rubidium and cæsium, Wheeler, 267.
Tungstous oxides, Headden, 280.
Coast Survey, U. S., base apparatus of, Woodward, 33.
Colles, G. W. Jr., distance of the stars by Doppler's principle. 259.
Color photography, Lippman, 68.
Colors of cloudy condensation, Barus, 150, 528.
Concave gratings, asymmetry in, Rydberg, 350.
Conrad's works, republication, 335.
Coral reefs of the West Indies, Agassiz, 78, 358.
Cornu, how blanched seedlings may be saved, 356.
Crehore, A. C., Alternating Currents, 435.
Cross, W., igneous rocks of Mexico. 119.

D

Dall, W. H., Correlation papers, Neocene, 351; Tertiary mollusks in Florida, 441.
Dallmeyer, new lens, 158.
Dana, E. S, Catalogue of American Mineral Localities, 441.
Darton, N. H., Oneonta and Chemung formations in eastern central New York, 203; Magothy formation of Maryland, 407.
Dawson, J. D., early Cretaceous floras in Canada and the United States, 439.
Derby, O. A., nepheline rocks in Brazil, 74.
Diatomaceæ, deposit of, Edwards, 385.
Discoliths in clay beds, Edwards, 526.
Dodge, F. S., Kilauea, August, 1892, 241.
Douvillé, Panama geology, 74.
Dumble, E. T., geol. survey of Texas, 354.

E

Earth, age of the, King. 1; Fisher, 464.
Edwards, A. M., deposit of diatomaceæ, 385; Discoliths in clay beds, 527.
Electric charges, loss of, in diffuse light and in darkness, Brauly, 523.
potential of, Heydneiler, 350.
current, force exerted by, Moreland, 392.
currents of high frequency, Swinton, 350.
waves, interference of, 159.
refraction by alcohol, Ellinger, 254.
Electrical oscillations of low frequency and their resonance, Pupin, 325, 420, 503.
Electricity, influence of the character of metallic points on discharges of, Wurtz, 523.
Electro-chemical effects due to magnetism, Squier, 443.
Electromagnetic theory of color dispersion, Helmholtz, 434.
Endlich, F. M, Manual of Qualitative Blowpipe Analysis and Determinative Mineralogy, 76.
Equipotential lines, Lommel, 435.

F

Fairbanks, H. W., so-called Wallala beds as a division of the California Cretaceous, 473.
Fisher. O., rigidity not to be relied upon in estimating the earth's age, 464.
Flammarion, La Planète Mars, 77.
Fletcher, Optical Indicatrix, 255.
Florida, Neocene of, Dall and Harris, 353.
phosphate fields, Johnson, 497.
Foote. A. E., meteoric stone of Bath, South Dakota, 64.
Fossil, see GEOLOGY.
French Academy, Botanical prizes, 355.

G

Gain, E., influence of moisture on vegetation, 356.
Galvanometer, sensitive, DuBois and Rubens. 350.
Ganot's Physics, 14th English edition, 436.
Geikie, A., geol. map of Scotland. 74.
Gelatine slides for lantern projections, Waggener. 78.
Genth, F. A., "Anglesite" associated with boléite. 32.
Geological map of Baltimore, Williams, 73; Scotland, Geikie, 74; Chattanooga, Tenn., 163.
Society, new, 524.
GEOLOGICAL REPORTS AND SURVEYS—
Alabama, Smith, 163.
Arkansas, 1891, Branner. 73.
Michigan. 1891 and 1892. 354.
Minnesota. 1890, Winchell. 73.
Missouri, 1892, Winslow, 354.
Pennsylvania, Lesley, 73.
Texas, 1892, Dumble 354.
GEOLOGY—
Anchisaurus, restoration of, Marsh, 169.
Archæan in northern Michigan, Wadsworth. 72.
Basic dike near Hamburg. N. J., Kemp, 298.
Bryozoa of the Lower Silurian in Minnesota, Ulrich. 440.
Cambrian fossils of New Brunswick, Matthew, 164.
in Missouri, Winslow. 221.
North American Continent during, Walcott, 163.
Ceratops beds of Wyoming, Hatcher, 135.
Claosaurus, brain and skull of, Marsh, 83.
Cretaceous bird allied to Hesperornis, Marsh, 81.
GEOLOGY—
Cretaceous floras in Canada and the U. S., correlation of early, Dawson, 439.
formation of Mexico. Hill, 307.
Devonian fishes of Canada, Woodward, 73.
Earth's age, King, 1; Fisher, 464.
Eureka District. geology, Hague, 161.
Flora tertiaria Italica, Meschinelli and Squinabol, 438.
Folds and faults, underthrust, Smith, 305.
Fossil mammals, North American, 159.
Plants as tests of Climate, Seward. 438.
of the Coal measures, Williamson. 437.
Geologic time. discussed, King 1; Upham. 209; Fisher. 464.
Glacial period. unity of, Upham, 70; diversity of, Chamberlin, 171; in Iowa. McGee, 71; in Russia, Nikitin, 459.
Hematite and martite iron ores in Mexico, Hill, 111.
Ice age as one glacial epoch, Upham, 70.
Lafayette formation, McGee. 163.
Neocene, Dall and Harris, 351.
Nikitin on the Quaternary deposits of Russia, Wright, 459
Oneonta and Chemung formations in Eastern Central New York, Darton, 203.
Oriskany fauna. Columbia Co., N. Y., note on, Barrett, 72.
Palæobotany of the Cretaceous formation of Staten Island, Hollick. 437.
Phosphate fields of Florida, Johnson, 497.
Pleistocene history of N. E Iowa, McGee, 71.
Quaternary carnivores of the Island of Malta, 74.
deposits of Russia, Nikitin on the, A. A. Wright. 459.
Soils, origin and nature, Shaler, 163.
Tæniopterid fern and its allies, new, White, 439.
Tertiary geology of Calvert Cliffs, Md., Harris. 21.
Mollusks of Florida, Dall. 441.
Time, geologic, discussed, King, 1; Upham. 209; Fisher. 464.
Wallala beds. so-called, as a division of the California Cretaceous, Fairbanks, 473.
Geology, Annals of British, 1891, Blake, 525.
experiments in, Reyer, 164.

Geology, Journal of, 354.
practical, Krahmann, 525.
Geyser, experiments with an artificial, Graham, 54.
Glacial, see GEOLOGY.
Glaciers, excavations by, 74.
Glazebrook, R. T., Practical Physics, 436.
Gooch, F. A., determination of iodine in haloid salts by arsenic acid, 334.
Goodale, G. L., botanical notices, 355, 525.
Gould, B. A., address before the American Metrological Society, 246.
Graham, J. C, experiments with an artificial geyser, 54.
Gratings, concave, asymmetry in, Rydberg, 350.
Gravity, daily variation, Mascart, 349.
determinations, use of pendulums, Mendenhall, 144.
at the Hawaiian Islands, Preston, 256.
Groth, P, Index of Mineralogical Literature, 1885-91, 442.

H

Hague, A., Geology of the Eureka district, 161.
Hall, E. H., Text-book of Physics, 255.
Hall, J. P., a short cycle in weather, 227.
Hall's phenomenon, Lommel, 159, 435.
Harlow, Practical Astronomy, 528.
Harris, G. D., Tertiary geology of Calvert Cliffs, Md., 21; Correlation papers, Neocene, 351.
Hatch phonolite in Great Britain, 441.
Hatcher, J. B., Ceratops beds of Wyoming, 135
Headden, W. P., stannite from Black Hills, S. D, 105; tungstous oxide, 280.
Heat, determination of the mechanical equivalent of, Christiansen, 350.
radiation and absorption by leaves, A. G. Mayer, 340.
Hill, R. T., hematite and martite iron ores in Mexico, 111; Cretaceous formation of Mexico, 397.
Hobbs, W. H., lime- and alumina-bearing talc, 404.
Hodgkins fund prizes, 442.
Hoffmann, G. C., chemical contributions to the geology of Canada, 75.
Hollick, A., paleobotany of the Cretaceous formation, Staten Island, 437.
Holman, S. W., Precision of measurements, 524.
Hydrostatics and Hydrokinetics, Minchin, 528.

I

Iowa, bulletin, State university laboratories, 168.
Irrigation Engineering, manual, Wilson, 442.
Isothermals, isopiestics and isometrics relative to viscosity, Barus, 87.

J

Johnson, L. C., phosphate fields of Florida, 497.
Jones, G. W, Logarithmic tables, 362.

K

Kilauea, August 1892, Dodge, 241.
Kemp, J. F., a basic dike near Hamburg, N. J., 298.
King, C., age of the earth, 1.
Kokscharow, N. von, Mineralogy of Russia, 525; obituary, 362.
Krahmann, M., Zeitschrift für praktische Geologie, 525.

L

Lea, M. C., nature of certain solutions and means of investigating them, 478.
Leaves, radiation and absorption of heat by, A. G. Mayer, 340.
Lens, telephotographic, new, Dallmeyer, 158.
Lesley, J. P., geol. survey of Pennsylvania, 73.
Letters of Berzelius and Liebig, 433; of Scheele, 434.
Light, refraction of, upon the snow, Whitney, 389.
Lindgren, W., sodalite-syenite and other rocks from Montana, 286.
Lippman, color photography, 68.
Liversidge, magnetite in certain minerals and rocks, 76.
Logarithmic tables, Jones, 362.
London, Royal Society, 79.
Ludeking, C., specific heat of liquid ammonia, 200.

M

Macroura, embryology and metamorphosis in, Brooks and Herrick, 166.
Magnetic and electrical instruments, Quincke, 254.
effect of the sun upon the earth, Thomson, 69.
variations, registration, Eschenhagen, 524.
Magnetism, electro-chemical effects due to, Squier, 443.

Magothy formation of Maryland, Darton, 407.
Malta. Quaternary carinvores of the Island of, 74.
Mars, the planet, Flammarion, 77.
Marsh, O. C., new Cretaceous bird allied to Hesperornis, 81; brain and skull of Claosaurus, 83; restoration of Anchisaurus, 169.
Matthew, G. F., Cambrian fossils of New Brunswick, 164.
Mayer, A. G., radiation and absorption of heat by leaves, 340.
McGee, W. J., Pleistocene history of Northeastern Iowa, 71; Lafayette formation, 163.
Measurements. Discussion of the Precision of, Holman, 524.
Mechanics of the earth's atmosphere, Abbe, 442.
of solids and fluids, Selby, 528.
Theoretical, Spencer, 255.
Melville, W. H., analyses of rocks from Montana, 286.
Mendenhall, T. C., use of planes and knife-edges in pendulums for gravity measurements, 144.
Mercury voltaic arc, Avon, 159.
Meschinelli, A., flora tertiaria Italica, 438.
Mesnard, localization of the perfumes of flowers, 355.
Metamorphosis of the same species, large variations in, Brooks and Herrick, 166.
Meteorite, Bath, S. Dakota, Foote, 64.
from Japan, Ward, 153.
Meteorites, lines of structure in, Newton, 152, 355.
Meteors, Andromed, of November, 1892, Newton, 61.
Geminid, Dec. 11, 1892, 77.
Metrological Society, American, address before, Gould, 246.
Miche, Practical Astronomy, 528.
Minchin, G. M., Hydrostatics and Hydrokinetics, 528.
Mineral Localities, Catalogue of American, Dana, 441.
Mineralien, mikroskopische Physiographie der, Rosenbusch, 75.
Mineralogical and Crystallographical Literature from 1885–1891, Groth and Grünling, 442.
Mineralogy, Manual of Determinative, Endlich, 76.
MINERALS—
Anglesite. Lower California, 32; Arsenopyrite, Algoma, Ont., 75.
Baddeleyite, Ceylon, 164. Blueite, Ontario, 165, 496. Brazilite, Brazil, 164.
MINERALS—
Cookeite, Maine, 393. Cuprocassiterite, Black Hills, 108, 166.
Datolite, Loughboro, Ont., 100.
Ettringite, Arizona, 489.
Folgerite, Ontario, 165, 494.
Geikielite, Ceylon, 164. Gersdorffite, Algoma, Ont., 75.
Hauchecornite, Germany, 166. Hematite, Mexico, 111.
Magnetite in minerals and rocks, 76; Mexico, 111. Martite, Mexico, 111.
Nickel-Skutterudite, New Mexico, 165.
Pentlandite, Ontario, 493. Pyrite, New York, 488. Pyrrhotite, nickeliferous, 76.
Stannite, Black Hills., S. D., 105.
Talc, lime- and alumina-bearing, Hobbs, 404.
Whartonite, Ontario, 165, 496.
Xenotime, El Paso Co., Colorado, 398.
Zunyite, Ouray Co., Colorado, 397.
Missouri, reports of Botanical Garden, 526.
Cambrian in, Winslow, 221.
Mixter, W. G., deportment of charcoal with the halogens, nitrogen, sulphur and oxygen, 363.
Moreland, S. T., force exerted by a current of electricity, 392.
Morphologische Studien, Schumann, 167.
Moses, A. J., Mineralogical notes, 488.

N

Newth, G S., Chemical Lecture Experiments, 68.
Newton, H. A., Andromed meteors of November, 1892, 61; lines of structure in meteorites, 152, 355.
Nikitin on Quaternary deposits in Russia, 459.
Nordenskiöld, Letters of Scheele, 434.
North American continent during the Cambrian, Walcott, 163.

O

OBITUARY—
Genth, F. A., 257.
Koksharov, N., 362.
Newberry, J. S., 79.
Owen, R., 80.
Seaton, H. E., 526.
Optical indicatrix and the transmission of light in crystals, Fletcher, 255.
Ostwald, von W., Lehrbuch der allgemeinen Chemie, 522.
Ostwald's Klassiker der exacten Wissenschaften, Engelmann, 78, 168.

P

Paleontology, see GEOLOGY.
Panama geology, Douvillé, 74.

Pendulums for gravity measurements, use of planes and knife-edges in, Mendenhall, 144.
Penfield, S. L., Cookeite from Maine, 393; mineralogical notes, 396; Pentlandite, Ontario, Canada, 493.
Philosophical Society, American, 527.
Phinney, J. L., barium sulphate in analysis, 468.
Phosphorescent rays, penetration of thin metallic screens, Lenard, 435.
Photographic study of the movement of projectiles, Neesen, 253.
Photography, color, Lippman, 68.
Physics. Atkinson-Ganot, 436.
Hall and Bergen, 255.
